

Znüni

App Icon — Three Variants

V4 mark · Z + location pin · Design handoff document

Cream

★ Recommended

Navy

Terracotta

The mark

Italic Z lettermark (left) + location pin / numeral 9 (right).

The pin's circle reads simultaneously as the head of a map pin and the loop of the numeral 9 — referencing "Zu Neun" (at nine), the Swiss German origin of the name Znüni.

Two elements, one mark. The Z establishes identity; the pin establishes purpose — a city companion.

Cream — Light mode

★ RECOMMENDED

Primary. Best on light iOS home screen. Navy Z is authoritative; terracotta pin reads warm.

1024 × 1024 pt (shown at 140pt)

ALL REQUIRED SIZES

COLOUR SPECIFICATION

Background
0XF5F0E8

Z mark
0X1A3A5C

Pin / 9
0XC4623A

Xcode Asset Catalog
AppIcon.appiconset — add all sizes above.
For alternate icons: register in Info.plist under CFBundleAlternateIcons.

Navy — Dark / premium

Strongest contrast. Best on dark home screen or against wallpaper. Feels premium.

1024 × 1024 pt (shown at 140pt)

ALL REQUIRED SIZES

AppIcon.appiconset — add all sizes above.

For alternate icons: register in Info.plist under CFBundleAlternateIcons.

Terracotta — Warm / expressive

Most expressive. Stands out on any home screen. Pin in navy creates strong contrast.

User-selectable icon — iOS implementation

Allow users to switch between all three variants in Settings → Appearance.

Cream
Default

Navy

Terracotta

IOS IMPLEMENTATION STEPS

1

Asset Catalog

Create three appiconset entries: `AppIcon (cream/default)`, `AppIcon-Navy`, `AppIcon-Terra`. Each set requires all sizes listed on the variant pages.

2

Info.plist

Register alternate icons under `CFBundleAlternateIcons`:
`CFBundleIcons` → `CFBundleAlternateIcons` → `AppIcon-Navy` / `AppIcon-Terra`

3

Swift API

Call `UIApplication.shared.setAlternateIconName("AppIcon-Navy")` to switch.
Pass `nil` to revert to the primary icon.

4

Settings UI

Add an Appearance section in your Settings screen.
Show all three icons as tappable tiles; checkmark the active one.

5

Persistence

Store the selected icon name in `UserDefaults`.
Restore on launch — `UIApplication` reads it automatically.

```
// Switch to navy icon
UIApplication.shared.setAlternateIconName
("AppIcon-Navy") { error in
    if let error { print(error) }
}
```
